SecureVisio SV – All-in-One SOC Platform

A modern security platform built from scratch to meet the demands of today's SOC.

secureVISIO EMIB Certified Partner

The traditional approach (SIEM + SOAR + XDR) is a model from 2010–2015. Today, with log volumes growing exponentially and attacks becoming more advanced, SOC operators do not have time to switch between three different systems.

SecureVisio SV changes this logic — everything in one place.

10 Key Differences

1. Integrations

Problem:
Webhooks, delays, data synchronization issues.

Solution:
All modules, one database. Zero delays.

2. Business Context

Problem:
Operator searches manually: server → services → data.

Solution:
The system knows automatically. Immediate, clear picture.

3. Scaling

Problem:
EPS limits. Growth from 500 → 5000 users = 20× higher cost.

Solution:
No EPS limits. TCO lower by 40–60%.

4. Embedded UEBA

Problem:
Separate tool, requires integration, switching between windows.

Solution:
UEBA built directly into the SIEM. Anomalies visible immediately.

5. AI Assistant

Problem:
Generic ChatGPT without infrastructure context.

Solution:
AI with full, local context. Concrete, actionable steps.

6. Network Map

Problem:
Alert without knowing "what is this host".

Solution:
Interactive Network Map + Threat Path. Analysis faster by 30%.

7. Event System

Problem:
SOAR as an overlay on a standard ticketing system.

Solution:
System built from scratch for SOC. SLAs, statuses, playbooks.

8. Instant Automation

Problem:
Webhooks and synchronization take 5–10 minutes.

Solution:
Everything in one system. Reaction in <5 seconds.

9. Integrated Vulnerabilities

Problem:
Independent scanner, CSV file imports.

Solution:
Direct scanning. Vulnerabilities visible directly on assets.

secureVISIO EMIB Certified Partner

10. No "Drift"

Problem:
Parser changes, but SOAR doesn't know about it.

Solution:
Single configuration.
Zero data drift.

secureVISIO

Choose SecureVisio if:

- You want one cohesive system instead of SIEM + SOAR + XDR + UEBA.
- You work with large log volumes (100TB+/year).
- You need full On-Premise control.
- You are looking for real automation and rapid detection.
- You work in a regulated environment.

Cost Comparison (TCO for 5000 users):

Solution	Cost
SIEM + SOAR + XDR	**High costs**
secureVISIO	**40–60% savings**
